Inexpensive Table

This table was built to provide a simple, cost effective way for a child to play with toys when seated on the floor. A simple tray was constructed out of triwall cardboard (a byproduct of the local furniture industry—they use it to ship furniture). The tray is strong, can be easily adapted by cutting it, and can even be covered with contact paper to add color and allow it to be wiped clean. Total cost of the table was about \$7.00 for the triwall and glue.
